# Designed with the future in mind

5 kW to 1.86 MW

SWISS MADE

### StratusPower<sup>™</sup> The ultimate UPS for net-zero data centers

StratusPower is an innovative uninterruptible power supply (UPS), specifically designed to meet the rigorous demands of today's IT infrastructure.

Designed and manufactured in Switzerland, StratusPower's superior topology, referred to as **DARA**, ensures full availability with **no single point of failure**, providing data center operators with complete peace of mind. Furthermore, installation of StratusPower is straightforward and maintenance is simple and non-intrusive.

#### Minimise your total cost of ownership while achieving the highest levels of availability and reliability for your data center.

97.6% VFI efficiency Reliable semiconductor technology 525 kW/m<sup>2</sup> Space-saving footprint

99.9999999 % availability No single point of failure

Fully redundant DARA - fault-tolerant architecture

Fully connected multi-protocol and a full range of communication channels available From 5 kW – 1.86 MW In cabinets from 5 kW to 744 kW

Non-intrusive maintenance 15+ years caps and smart fans

Smart energy peak-shaving, self-test

#### When it comes to availability, it's what's inside that counts

With DARA, each UPS module is independent, redundant and interconnected. Each module is a complete UPS system in its own right, with three independent power converters, a static bypass and all the hardware devices needed to safely isolate a fault without impacting the load. This maximises the mean time between failures (MTBF) and safeguards the power to your critical applications. DARA's Distributed Decision Making technology, referred to as DDM<sup>™</sup>, elevates redundancy by enabling collaborative decision-making among all modules. This ensures the continuous power supply to your load, even during crucial decision-making moments. With DDM, the UPS can make distributed decisions, eliminating the single point of failure typically associated with master-slave technology. As a result, downtime is minimised, and critical loads remain protected.

### Maximised availability at module, frame and system level

#### Mean time to repair (MTTR)

DARA's technology on the frame level has been designed to accommodate **non-intrusive maintenance** and to **minimise mean time to repair (MTTR)**, ensuring that any downtime is kept to an absolute minimum. For example, in the event of a power failure, frontal access to components avoids the need for removing modules, thereby reducing the risk of human error.

9-nines Power availability

# Unveiling the power of StratusPower

At Centiel, we understand our customers' pain points and have designed the StratusPower with availability and sustainability as major considerations. With StratusPower, we guarantee peace of mind by knowing that your critical infrastructure is protected by the most advanced UPS technology.

### The future-ready UPS

**Cybersecure connection** Compliant IEC-4-62443-2

### Advanced energy management

StratusPower provides **peak-shaving capabilities** to help businesses manage electricity usage and reduce costs. By utilising StratusPower's peak-shaving feature,

businesses can reduce their energy consumption during peak hours when electricity rates are typically at their highest. This results in significant cost savings.

# StratusPower's peak-shaving capabilities

At times of peak consumption, grid operators may charge higher prices for their power. To minimise costs for the user, a portion of the energy stored locally in the UPS can be utilised during these times, thereby reducing the amount drawn from the grid.

The UPS batteries can then be recharged with power during off-peak times.

### With the future in mind

StratusPower is **future-ready** and can connect to a variety of power generation sources. It is equipped to

provide grid support and manage energy efficiently based on the specific requirements of each application.

DC Flex technology

Our unique DCFlex<sup>©</sup> technology offers unparalleled flexibility when it comes to battery storage installation and configuration, as well as preparing the infrastructure to manage both current and future energy sources.

Our UPS solution is compatible with various battery storage devices, allowing you to reuse the DC supply or to choose the option that best suits your needs and budget.

The StratusPower battery charging current capability is 500 percent higher than our closest competitors, meaning faster charging times and more efficient use of your batteries.

**Robust and reliable** semiconductor technology

The StratusPower incorporates proprietary technology for inverter physical isolation in the event of an IGBT failure, ensuring maximum uptime for your critical infrastructure.

The triple-mode parallel bus provides an extra layer of redundancy, eliminating any single point of failure in communication between frames and modules.

At Centiel, we take reliability very seriously. That's why we designed our technology with extra-safe power of 24%, ensuring a higher level of reliability and redundancy. With continuous operating capacity, each module can operate at 37 kW even under overload conditions. The 372 kW StratusPower UPS has the ability to operate in online mode, supporting loads up to 446 kW.

37kW UPS module capacity at continuous overload

### **Predictive and remote** health monitoring

With its computing capabilities and more than 100 measurement points, StratusPower does the work for you, ensuring that maintenance is performed promptly and accurately. This not only saves time and effort but also improves your system's overall reliability and safety.

Bluetooth connectivity allows technicians for easy, non-intrusive monitoring via mobile devices, with the Centiel app providing real-time status updates and alerts.

StratusPower provides advanced cybersecurity features in compliance with IEC-4-62443-2, making certain that your critical data and systems are protected from cyber threats.

Exceeding performance expectations

With a THDi of less than 1 percent, StratusPower provides excellent performance that exceeds regulatory requirements.

The UPS is able to handle 124% of continuous overload and 125% overload for 1 minute, ensuring uninterrupted power delivery during times of peak demand.

A **short circuit capability above 3xIn** safeguards your equipment and system integrity despite electrical faults.

Tangible sustainability: We help your data center achieve CO2 emissions targets through our solutions and services.

### **Energy efficiency**

StratusPower is designed with energy efficiency in mind, using the latest technology to reduce energy consumption and minimise losses.

#### Zero waste

StratusPower is manufactured using eco-friendly materials, ensuring that our products have minimal impact on the environment.

#### Net zero by design

Our company is continuously committed to improving our sustainability practices, and we manufacture StratusPower using environmentally friendly processes to minimize our impact on the environment.

97.6% (VFI) efficiency

95% of the energy used for production testing is recycled

### The versatile Universal Rack UPS solution

Available as a Universal Rack UPS, StratusPower offers a blend of technical and commercial benefits tailored to meet a variety of power protection needs. This adaptable system includes the UPS, communication components, battery breakers and output switches, making it ideal for integrated IT, telecom or other critical processes. The UPS integrates seamlessly into **any 19-inch rack**, regardless of the rack manufacturer.

With its versatile design, StratusPower simplifies the engineering and deployment of custom power protection solutions. System integrators can leverage their expertise and implement unique solutions to meet specific design requirements. The UPS can be seamlessly integrated into weatherproof enclosures, making it ideal for applications in harsh environments.

The Universal Rack Solution provides **efficient heat management** by directing warm air to the rear of the cabinet for optimal cooling without affecting the entire enclosure.

For system integrators, the Universal Rack solution offers efficient **customisation with standard products** and the opportunity to add significant local value to their power protection solutions.

The Universal Rack offers **versatile battery placement options**, allowing either top or bottom customisation to suit specific preferences and operational requirements.

Thanks to the minimal size of the **5/10/12.5 and 15 kW** modules, the Universal Rack UPS solution is available **in compact depths from 600 mm**, providing a space-saving solution without compromising performance.

### Universal Rack UPS solution

#### Available UPS power rating configurations

Power per rack Power per module (kVA =KW) N-modules Height From 5 to 15 kW 5/10/12.5/15 kW 1 8 HU

From 5 to 30 kW 5/10/12.5/15 kW 1 to 2 12 HU

From 5 to 60 kW 5/10/12.5/15 kW 1 to 4 21 HU

### The Universal Rack UPS includes

Fits seamlessly into any 19" rack

Up to four UPS modules online double conversion

Individual module display

Electrical distribution

Output parallel isolator 1 x module

#### System manual bypass

L

**Connectivity board** 5x dry output, 5x dry input, USB, RS485,Bluetooth, Ethernet, slot for SNMP

Up to four battery modules in a single cabinet Free placement of internal battery modules bottom or top

Available in depth from 600 mm

#### Comprehensive options for StratusPower modules

Designed to meet a variety of applications, StratusPower offers a range of modules to meet your needs, including compact modules up to 15 kW and more powerful modules up to 31 kW. The adaptability extends further

with the capability to consolidate power in a single cabinet, spanning from 5 kW to an impressive 744 kW. Scaling doesn't stop there—StratusPower cabinets can be seamlessly expanded to a staggering 1.86 MW.
